THE WEB BEGAN DYING IN 2014, HERE'S HOW

30 OCT 2017

Before the year 2014, there were many people using Google, Facebook, and Amazon. Today, there are still many people using services from those three tech giants (respectively, GOOG, FB, AMZN). Not much has changed, and quite literally the user interface and features on those sites has remained mostly untouched. However, the underlying dynamics of power on the Web have drastically changed, and those three companies are at the center of a fundamental transformation of the Web.

It looks like nothing changed since 2014, but GOOG and FB now have direct influence over 70%+ of internet traffic.

PRESS FREEDOM STATUS: Not Free

Introduction

While the Burmese military junta is interested in expanding and exploiting information and communication technologies (ICTs) for business and propaganda purposes, it makes aggressive attempts to regulate access to the internet and digital media, control content, and punish citizens for any online activity that is seen as detrimental to regime security. Egypt Cuts Off Most Internet and Cell Service

By MATT RICHTEL JAN. 28, 2011

Autocratic governments often limit phone and Internet access in tense times. But the Internet has never faced anything like what happened in Egypt on Friday, when the government of a country with 80 million people and a modernizing economy cut off nearly all access to the network and shut down cellphone service.

The shutdown caused a 90 percent drop in data traffic to and from Egypt, crippling an important communications tool used by antigovernment protesters and their supporters to organize and to spread their message.

Vodafone, a cellphone provider based in London with 28 million subscribers in Egypt, <u>said in a statement</u> on its Web site that "all mobile operators in Egypt have been instructed to suspend services in selected areas." The company said it was "obliged to comply" with the order.

Ma se i siti e provider locali potevano essere soggetti a controllo, una corporation Americana non lo era

Twitter Revolution

From Wikipedia, the free encyclopedia

The term Twitter Revolution refers to different revolutions and protes

- 2009 Moldova civil unrest, claiming that the elections, which saw the
- 2009–2010 Iranian election protests, also known as Green Revoluti
- 2010–2011 Tunisian revolution, also known as Jasmine Revolution
- . Egyptian Revolution of 2011, in which the regime of Hosni Mubarak
- Euromaidan Revolution in Ukraine, beginning in November 2013.

... chiamarle Twitter revolution non è corretto rispetto ai movimenti politici locali, ma questo è il framing che gli è stato attribuito.

SECURITY

IDITY

End-to-end encryption

Privacy and security is in our DNA, which is why we have end-to-end encryption. When end-to-end encrypted, your messages, photos, videos, voice messages, documents, status updates and calls are secured from falling into the wrong hands.

WhatsApp end-to-end encryption ensures only you and the person you're communicating with can read what's sent, and nobody in between, not even WhatsApp. Your messages are secured with locks, and only the recipient and you have the special keys needed to unlock and read your messages. For added protection, every message you send has an unique lock and key. All of this happens automatically: No need to turn on settings or set up special secret chats to secure your messages.

Experimental evidence of massive-scale emotional contagion through social networks

Adam D. I. Kramer, Jamie E. Guillory, and Jeffrey T. Hancock

PNAS June 17, 2014. 111 (24) 8788-8790; published ahead of print June 2, 2014. https://doi.org/10.1073/pnas.1320040111

Edited by Susan T. Fiske, Princeton University, Princeton, NJ, and approved March 25, 2014 (received for review October 23, 2013)

This article has corrections. Please see:

Editorial Expression of Concern: Experimental evidence of massivescale emotional cont agion through social networks

Correction for Kramer et al., Experimental evidence of massive-scale emotional contagi on through social networks

Article

Authors & Info

Significance

We show, via a massive (N = 689,003) experiment on Facebook, that emotional states can be transferred to others via emotional contagion, leading people to experience the same emotions without their awareness. We provide experimental evidence that emotional contagion occurs without direct interaction between people (exposure to a friend expressing an emotion is sufficient), and in the complete absence of nonverbal cues.
